SHIVAMOGGA-577 222, Karnataka

1. CLASSIFICATION OF HABITS :-

- i) Useful and harmful habits
- ii) Empty and meaningful habits
- iii) Popsuck, Non Pressure & biting habits
- iv) Compulsive and Non compulsive habits
- v) Kingsley classification
 - a) Functional habits
 - b) muscular habits
 - c) combined muscular habits
 - d) postural habits

THUMB SUCKING :-

* Placement of the thumb or one or more fingers is varying depth into the mouth.

EFFECTS :-

i) on maxilla :-

- constricted maxilla, due to lowered tongue position and buccinator action during sucking.
- increased SNB angle.

ii) on maxillary teeth :-

- spacing of maxillary anterior.
- increased maxillary arch length.

iii) on Inter-arch relationship:-

- Increased overjet
- Decreased overbite
- open bite

iv) on upper lip:-

- Short hypotonic lip
- competent upper lip.

v) on thumb:-

- Presence of clean nail & callus on the fingers.

vi) on lower lip:-

- hyperactive lower lip.

vii) on mandibulo maxilla:-

- Retroclination of mandibulo anterior.

MANAGEMENT:-

1. Psychological approach:-

- * Childrens lacking parental care, love, and affection develop this habit.
- * Parents should be counselled.
- * Divert the child's attention to other things such as play and toys.

2. Reminding aids:-

- * Use of thermoplastic thumb guard.
- * Bandaging the elbow to avoid flexing of hand.

3. Mechanical aids:-

- * Removable Habit breaker:- Removable removable appliance
- * Rem Fixed Habit breaker:-
- * Flat crib thumb
- * Vertical crib thumb sucking appliance.
- * Vertical rate appliance
- * Blue gran appliance.

4. Chemical approach:-

- * Quinine
- * Pepper dissolved in a volatile medium
- * Aca-tootida.

2. WOLFF'S LAW:-

Wolff's law is developed by German anatomist and surgeon Julius Wolff in 19th century.

→ He states that "Bone in a healthy person or animal will adapt to loads under which it is placed".

→ If loading on a particular bone increases, then bone will remodel it self over-time to become stronger to resist that sort of loading.

→ The internal architecture of the trabeculae undergoes adaptive changes, followed by secondary changes to the external cortical portion of the bone, periosteum becoming thicker as a result.

→ The inverse is true as well. If the loading on a bone decreases, the bone will become less dense & weaker due to

base of stimulus required for continued remodeling.

- The changes are accomplished by means of resorption of existing bone & deposition of new bone.
- Wolff's law is briefly states that bone changes its entire shape & internal architecture in response to stresses acting on it.

3) SERIAL EXTRACTION:-

It is an interception orthodontic procedure usually initiated in the early mixed dentition.

Indications:-

1. Class I malocclusion showing harmony between skeletal and muscle system.
2. Arch length deficiency as compared to the tooth.
3. Patients with straight profile & pleasing appearance.
4. Where growth is not enough to overcome the discrepancy between tooth material and basal bone.

Contraindications:-

1. Class II & III malocclusion with skeletal abnormalities.
2. Spaced dentition.
3. Anodontia / oligodontia.
4. Open bite & deep bite.
5. Midline diastema.
6. Class II malocclusion with minimal space deficiency.
7. Extensive caries.

Procedures:-

- a) Dawson's method
- b) Tweed's method
- c) Nance method.

a) Dawson's method:-

It has 3-step serial Extraction procedure.

In the first step, deciduous canines are extracted to create space for alignment of the incisors.

- Later deciduous first molars are extracted so that eruption of first premolars is accelerated.
- This is followed by extraction of erupting first premolars to permit the permanent canines to erupt in their place.

4. TONGUE THRUSTING :-

It is a condition, in which the tongue makes contact with any part anterior to the molars during swallowing.

Classification :-

- Type I :- Non-deforming tongue thrust
- Type II :- Deforming anterior tongue thrust
- Type III :- Deforming lateral tongue thrust
- Type IV :- Deforming anterior & lateral tongue.

Simple classification :-

- Simple tongue thrust
- Complex tongue thrust

Clinical features :-

- * Proclination of anterior teeth.
- * Anterior open bite
- * Bilateral protrusion.
- * Posterior open bite
- * Posterior cross bite

Management :-

Habit Interception :-

1. Tongue thrust can be intercepted by use of habit breaker. Both fixed & removable cribs or splines are valuable aids in breaking the habit.
2. Child is taught the correct method of swallowing.
3. Various muscle exercises of the tongue can help in training it to adapt to the new swallowing pattern.

Treatment of malocclusion :-

once the habit is intercepted the malocclusion associated with the tongue thrust is treated using removable or fixed orthodontic appliances.

5. MIDLINE DIASTEMA :-

Anterior midline spacing b/w two maxillary central incisors.

Cause :-

- * Transient malocclusion.

- * Teeth malaligned arch length discrepancy

- * unerupted mandibular

- * Abnormal frenal attachment

- * Proclination

- * midline pathology

- * Retrogenic

Treatment :- 3 phases.

1. Removal of cause

2. Active treatment

3. Retention.

→ Removable appliance :-

- * Simple removable appliance incorporating finger springs or split labial bow.

→ Fixed appliance :-

- * Fixed appliance incorporating elastic or springs about bony about most rapid elastic correction of midline diastema.

6. Local factors in aetiology of malocclusion:-

1. Anomalies of number of teeth:-

a) Supernumerary teeth:-

→ Teeth that are extra to the normal complement:-

classification:- is peg shaped conical supernumerary teeth

ii) Bani shaped supernumerary teeth

iii) Supplemental teeth

iv) Odontomes.

b) Missing teeth:-

→ Congenitally missing teeth are by far more common than supernumerary teeth & can occur in either of jaws.

2. Anomalies of teeth size:-

→ In order to have normal occlusion, there should be harmony b/w the teeth size & arch length & also b/w maxillary and mandibular teeth size.

a) Macrodonia:- Teeth larger than normal.

b) Microdonia:- Teeth appear smaller in size compared to normal.

3. Anomalies of teeth shape:-

→ Presence of peg shaped maxillary lateral incisors

→ Presence of abnormally large cingulum on a maxillary incisor.

→ Anomalies of shape can occur as a result of developmental defects like amelogenesis imperfecta by proplasia of cells, fusion and gemination.

4) Abnormal labial frenum.

→ This condition is diagnosed by Positive blanch test.
→ midline diastema may also occur due to no. of causes including presence of unerupted maxillary, - anomalies of tooth size & number.

5) Premature loss of deciduous teeth.

6) Prolonged retention of deciduous teeth.

* bc faults in lingual or palatal eruption of their permanent successors.

7) Delayed eruption of permanent teeth.

8) Ankylosis:-

It is a condition, wherein a part or whole of root surface is directly fused to the bone with absence of the intervening periodontal membrane.

9) Dental caries:-

1.1 Improper Dental Restorations

1.1 Predisposing metabolic climate & Disease.

→ Endocrine disturbance

→ Dietary problems

→ Posture

→ Accidents & Trauma.

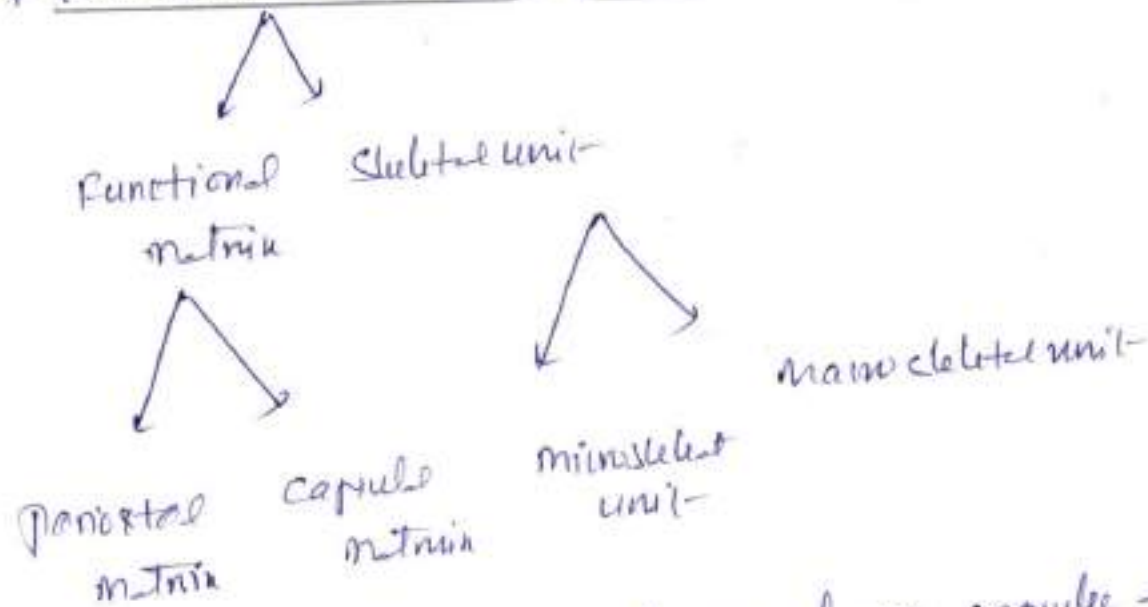

FUNCTIONAL MATRIX THEORY

It was proposed by Melvin Moss.

→ The functional matrix hypothesis claims that the origin, form, position, growth and maintenance of all skeletal tissues and organs are always secondary, compensatory and normally responsive to chronologically and morphologically prior events.

→ Each of these functions is carried out by a functional cranial component.

* Functional cranial component

* Neuro-cranial capsule and orofacial capsule are examples of capsule matrices.

* Each of these capsules is an envelope, which contains a series of functional cranial components.

* Neuro-cranial capsule surrounds & protects the neuro-cranial capsule functional matrix, which is brain, leptomeninges, & C.S.F.

8. Types of Tooth movement :-

1. Tipping :-

→ simple type of tooth movement, where single force is applied by the crown, which results in movement of the crown in the direction of force and root in the opposite direction.

2 types :-

- controlled tipping
- uncontrolled tipping.

2. Bodily movement :-

→ If a line of action of an applied force passes through the centre of resistance of a tooth, all the points on the tooth will move an equal distance in the same direction signifying a bodily displacement or translation.

3. Intrusion & Extrusion :-

→ Intrusion is the bodily displacement of a tooth along its long axis in an apical direction.

→ Extrusion is the bodily movement of a tooth along its long axis in an occlusal direction.

4) Rotation:-

→ Rotations are labial or lingual movements of a tooth around its long axis.

5) Torquing:-

→ It can be considered as a square tipping characterized by lingual movement of the feet.

6) Uprighting:-

→ During orthodontic treatment, the crown of certain teeth will be tipped in a mesio-distal direction with the roots tipped in the opposite way.

- Types :-
- 1) Pure Translation
 - 2) Pure Rotation
 - 3) Generalized Rotation

9. Ackerman-Proffit system of classification:-

This system of classification is based on roentgenographic diagram, that identifies 5 major characteristics.

Step 1:- (Alignment)

→ First step involves assessment of alignment and symmetry of the dental arch. It is classified as ideal crowded/spaced.

Step 2:- (Profile)

→ It involves consideration of profile.

- The profile is described as convex / straight / concave.
- The faul divergence is also considered in anterior or posterior divergence.

Step 3 (Type)

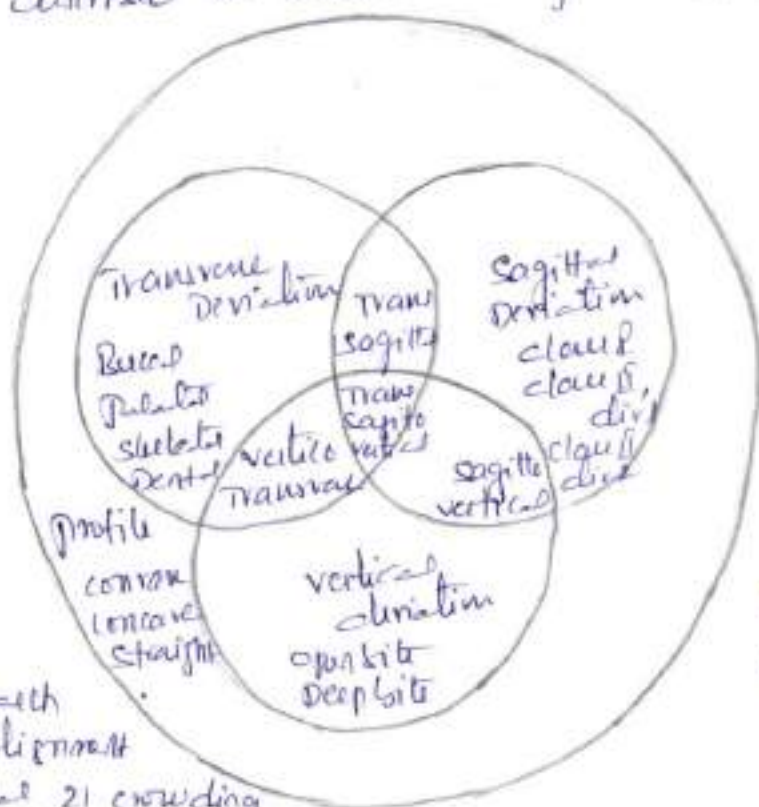

- Transverse skeletal and dental relationship is evaluated. Buccal and palatal crossbite if any are noted.
- The crossbite is further sub classified as unilateral or bilateral.
- In addition, differentiation is made b/w skeletal and dental crossbite.

Step 4 (Class)

- This involves assessment of sagittal relationship; It is classified as - Angle's class I / class II / class III malocclusion.

Step 5 (Bite depth)

- Malocclusion in the vertical plane are noted.
- They are described as anterior or posterior open bite.

POLICY- SLOW PERFORMERS

Measurable criteria for slow performers

1. Internal marks (below 50%) in sessional examinations
2. Poor performance in viva voce
3. Below average lab skills and practical performance
4. Attendance below 75%

Assessment methodology for slow performers:

The institution, teachers and mentors identify the slow learners by their continuous internal assessment (CIA) performance. The slow learners performance in the examinations is below pass percentage (50%), Lab skills, viva and practical performance during lab hours and in practical sessions is also below 50% and attendance below 75% are considered in this group.

POLICY-ADVANCED LEARNERS

Measurable criteria for advanced learners

1. Internal marks (>70%) in sessional examinations
2. Good performance in viva voce and practical skills
3. Winning prizes in co-curricular activities
4. Seminar presentation for assessing the knowledge on the subject
5. Involvement in publishing journals

Assessment methodology for advance learners:

The institution identifies the advance learners by their continuous internal assessment (CIA) performance which is above 70%. The skills of advance learners enable them to participate in conferences such as seminars, posters, quiz, lab skill competitions etc. The advanced learners are identified and constantly motivated so that their spirit is high and interested these students are guided by our faculties to do research programmes, paper presentations in conferences and self-directed learning which promotes confidence and they take ownership for their career growth.

SPECIAL PROGRAMS FOR SLOW AND ADVANCED LEARNERS

At Subbaiah Institute of Dental Sciences, we recognize the potential, the challenges and the needs of today's dental student.

In order to provide them with holistic education and equip emerging dental professionals with skills on par with global competitive standards, Subbaiah Institute of dental sciences offers the best in terms of infrastructure, co-curricular and extra-curricular opportunities.

Evaluation of the dental student is a continuous process and is based on the DCI and the RGUHS regulations. The Assessment will evaluate the knowledge, skills and attitudes of the student throughout the academic year.

Three sessional examinations (Internal assessment) are conducted in a year to periodically assess student academic progression. In addition to these sessional examinations, the students are evaluated based on assignments, record work completion, co-curricular activities such as seminars, group discussions and other subject specific activities.

The score pattern is based on the following matrix as specified by the RGUHS.

Theory	Viva	IA	Total	Pass
70	20	10	100	50

Practicals	Viva	IA	Total	Pass
70	20	10	100	50

For declaration of pass in a subject, a candidate shall secure 50% marks in the University examination both in theory and practical/clinical examinations separately.

Any student who scores below 50% marks in the written examination, performs poorly in viva voce and has below average lab and clinical skills will be considered as a slow learner, while a student who scores above 70 % in written examination, performs well in viva voce and has good skills will be considered as advanced learner.

After each Sessional exam, Slow and advanced learner are identified in each department based on their written exam, record work and clinical / practical end posting exams and viva voce.

Remedial measures for slow learners:

- Remedial sessions include 20hrs of extra training included which are distributed as:

Sl.No.	Remedial measure	Assigned hours
1.	Review of the subject	5 hrs
2.	Old question paper discussion and solving	3 hrs
3.	One on one discussion	2 hrs
4.	Remedial tests	4hrs
5.	Counselling	2 hrs
6.	Practical demonstrations	4 hrs

- Those students who are weak in practical aspects are asked to repeat exercises after repeat demonstration by the faculty, as the practice of dentistry is mainly based on hand skills of the dentist and skill level varies from student to student.
Hence, the faculty handhold the weaker students step by step, so that every student gains confidence to perform procedures and manage patients.
- Dental syllabus is progressive from the beginning of the academic year through three terms (topics are different for all the three terms) till the University Examination and hence the evaluations is also progressive. So, the results for the remedial measures are evident only in the University Examination.

Advanced learners:

- Advanced learners are encouraged to participate in intercollegiate quiz, poster and paper competitions.
- They are also motivated to take up short non-clinical studies to help them understand research process, and on completion of the study, assisted to publish their findings.
- Students with good practical skills are given more complex exercises, under supervision, to hone their talent.
- Students are also sent to participate in intercollegiate carving, cavity cutting and teeth setting competitions.
- Students are encouraged to present seminars and improve their teaching skills
- Such students are also felicitated and are encouraged further.

1. CLASSIFICATION OF HABITS :-

- i) Useful and harmful habits
- ii) Empty and meaningful habits
- iii) Popsuck, Non Pressure & biting habits
- iv) Compulsive and Non compulsive habits
- v) Kingsley classification
 - a) Functional habits
 - b) muscular habits
 - c) combined muscular habits
 - d) postural habits

THUMB SUCKING :-

* Placement of the thumb or one or more fingers is varying depth into the mouth.

EFFECTS :-

i) on maxilla :-

- constricted maxilla, due to lowered tongue position and buccinator action during sucking.
- increased over angle.

ii) on maxillary teeth :-

- spacing of maxillary anterior.
- increased maxillary arch length.

iii) on Inter-arch relationship:-

- Increased overjet
- Decreased overbite
- open bite

iv) on upper lip:-

- Short hypotonic lip
- competent upper lip.

v) on thumb:-

- Presence of clean nail & callus on the finger.

vi) on lower lip:-

- hyperactive lower lip.

vii) on mandibulo maxilla:-

- Retroclination of mandibulo anterior.

MANAGEMENT:-

1. Psychological approach:-

- * Childrens lacking parental care, love, and affection develop this habit.
- * Parents should be counselled.
- * Divert the child's attention to other things such as play and toys.

2. Reminding aids:-

- * Use of thermoplastic thumb guard.
- * Bandaging the elbow to avoid flexing of hand.

3. Mechanical aids:-

- * Removable Habit breaker:- Removable removable appliance
- * Rem Fixed Habit breaker:-
- * Flat crib thumb
- * Vertical crib thumb sucking appliance.
- * Vertical rate appliance
- * Blue gran appliance.

4. Chemical approach:-

- * Quinine
- * Pepper dissolved in a volatile medium
- * Aca-tootida.

2. WOLFF'S LAW:-

Wolff's law is developed by German anatomist and surgeon Julius Wolff in 19th century.

→ He states that "Bone in a healthy person or animal will adapt to loads under which it is placed".

→ If loading on a particular bone increases, then bone will remodel it self over-time to become stronger to resist that sort of loading.

→ The internal architecture of the trabeculae undergoes adaptive changes, followed by secondary changes to the external cortical portion of the bone, periosteum becoming thicker as a result.

→ The inverse is true as well. If the loading on a bone decreases, the bone will become less dense & weaker due to

base of stimulus required for continued remodeling.

- The changes are accomplished by means of resorption of existing bone & deposition of new bone.
- Wolff's law is briefly states that bone changes its entire shape & internal architecture in response to stresses acting on it.

3) SERIAL EXTRACTION:-

It is an interception orthodontic procedure usually initiated in the early mixed dentition.

Indications:-

1. Class I malocclusion showing harmony between skeletal and muscle system.
2. Arch length deficiency as compared to the tooth.
3. Patients with straight profile & pleasing appearance.
4. Where growth is not enough to overcome the discrepancy between tooth material and basal bone.

Contraindications:-

1. Class II & III malocclusion with skeletal abnormalities.
2. Spaced dentition.
3. Anodontia / oligodontia.
4. Open bite & deep bite.
5. Midline diastema.
6. Class II malocclusion with minimal space deficiency.
7. Extensive caries.

Procedures:-

- a) Dawson's method
- b) Tweed's method
- c) Nance method.

a) Dawson's method:-

It has 3-step serial Extraction procedure.

In the first step, deciduous canines are extracted to create space for alignment of the incisors.

→ Later deciduous first molars are extracted so that eruption of first premolars is accelerated.

→ This is followed by extraction of erupting first premolars to permit the permanent canines to erupt in their place.

4. TONGUE THRUSTING :-

It is a condition, in which the tongue makes contact with any teeth anterior to the molars during swallowing.

Classification :-

Type I :- Non-deforming tongue thrust

Type II :- Deforming anterior tongue thrust

Type III :- Deforming lateral tongue thrust

Type IV :- Deforming anterior & lateral tongue.

Simple classification :-

Simple tongue thrust

Complex tongue thrust

Clinical features :-

- * Proclination of anterior teeth.
- * Anterior open bite
- * Bilateral protrusion.
- * Posterior open bite
- * Posterior cross bite

Management :-

Habit Interception :-

1. Tongue thrust can be intercepted by use of habit breaker. Both fixed & removable cribs or splints are valuable aids in breaking the habit.
2. Child is taught the correct method of swallowing.
3. Various muscle exercises of the tongue can help in training it to adapt to the new swallowing pattern.

Treatment of malocclusion :-

once the habit is intercepted the malocclusion associated with the tongue thrust is treated using removable or fixed orthodontic appliances.

5. MIDLINE DIASTEMA :-

Anterior midline spacing b/w two maxillary central incisors.

Cause :-

- * Transient malocclusion.

- * Teeth malaligned arch length discrepancy

- * unerupted mandibular

- * Abnormal frenal attachment

- * Proclination

- * midline pathology

- * Retrosive

Treatment :- 3 phases.

1. Removal of cause

2. Active treatment

3. Retention.

→ Removable appliance :-

- * Simple removable appliance incorporating finger springs or split labial bow.

→ Fixed appliance :-

- * Fixed appliance incorporating elastic or springs about bony about most rapid elastic correction of midline diastema.

6. Local factors in aetiology of malocclusion:-

1. Anomalies of number of teeth:-

a) Supernumerary teeth:-

→ Teeth that are extra to the normal complement:-

classification:- is peg shaped conical supernumerary teeth

ii) Bani shaped supernumerary teeth

iii) Supplemental teeth

iv) Odontomes.

b) Missing teeth:-

→ Congenitally missing teeth are by far more common than supernumerary teeth & can occur in either of jaws.

2. Anomalies of teeth size:-

→ In order to have normal occlusion, there should be harmony b/w the teeth size & arch length & also b/w maxillary and mandibular teeth size.

a) Macrodonia:- Teeth larger than normal.

b) Microdonia:- Teeth appear smaller in size compared to normal.

3. Anomalies of teeth shape:-

→ Presence of peg shaped maxillary lateral incisors

→ Presence of abnormally large cingulum on a maxillary incisor.

→ Anomalies of shape can occur as a result of developmental defects like amelogenesis imperfecta by hyperplasia of cells, fusion and gemination.

4) Abnormal labial frenum.

→ This condition is diagnosed by Positive blanch test.
→ midline diastema may also occur due to no. of causes including presence of unerupted maxillary, - anomalies of tooth size & number.

5) Premature loss of deciduous teeth.

6) Prolonged retention of deciduous teeth.

* bt faults in lingual or palatal eruption of their permanent successors.

7) Delayed eruption of permanent teeth.

8) Ankylosis:-

It is a condition, wherein a part or whole of root surface is directly fused to the bone with absence of the intervening periodontal membrane.

9) Dental caries:-

1.1 Improper Dental Restorations

1.1 Predisposing metabolic climate & Disease.

→ Endocrine disturbance

→ Dietary problems

→ Posture

→ Accidents & Trauma.

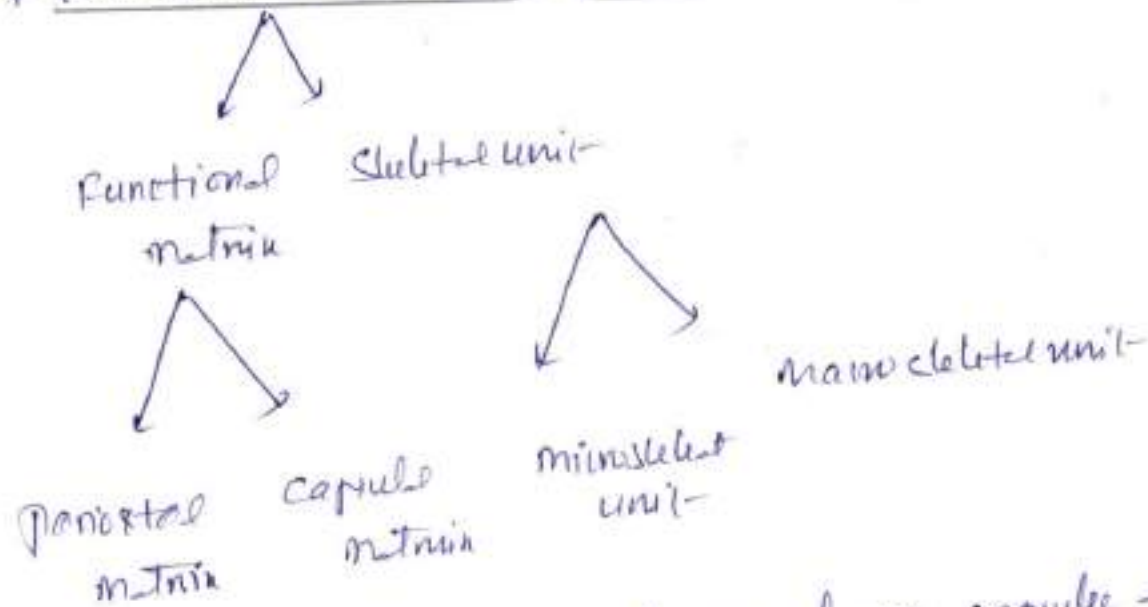

FUNCTIONAL MATRIX THEORY

It was proposed by Melvin Moss.

→ The functional matrix hypothesis claims that the origin, form, position, growth and maintenance of all skeletal tissues and organs are always secondary, compensatory and normally responsive to chronologically and morphologically prior events.

→ Each of these functions is carried out by a functional cranial component.

* Functional cranial component

* Neuro-cranial capsule and orofacial capsule are examples of capsule matrix.

* Each of these capsules is an envelope, which contains a series of functional cranial components.

* Neuro-cranial capsule surrounds & protects the neuro-cranial capsule functional matrix, which is brain, leptomeninges, & C.S.F.

8. Types of Tooth movement :-

1. Tipping :-

→ simple type of tooth movement, where single force is applied by the crown, which results in movement of the crown in the direction of force and root in the opposite direction.

2 types :-

- a) controlled tipping
- b) uncontrolled tipping.

2. Bodily movement :-

→ If a line of action of an applied force passes through the centre of resistance of a tooth, all the points on the tooth will move an equal distance in the same direction signifying a bodily displacement or translation.

3. Intrusion & Extrusion :-

→ Intrusion is the bodily displacement of a tooth along its long axis in an apical direction.

→ Extrusion is the bodily movement of a tooth along its long axis in an occlusal direction.

4) Rotation:-

→ Rotations are labial or lingual movements of a tooth around its long axis.

5) Torquing:-

→ It can be considered as a square tipping characterized by lingual movement of the feet.

6) Uprighting:-

→ During orthodontic treatment, the crown of certain teeth will be tipped in a mesio-distal direction with the roots tipped in the opposite way.

- Types :-
- 1) Pure Translation
 - 2) Pure Rotation
 - 3) Generalized Rotation

9. Ackerman-Proffit system of classification:-

This system of classification is based on roentgenographic diagram, that identifies 5 major characteristics.

Step 1:- (Alignment)

→ First step involves assessment of alignment and symmetry of the dental arch. It is classified as ideal crowded/spaced.

Step 2:- (Profile)

→ It involves consideration of profile.

- The profile is described as convex / straight / concave.
- The facial divergence is also considered in anterior or posterior divergence.

Step 3 (Type)

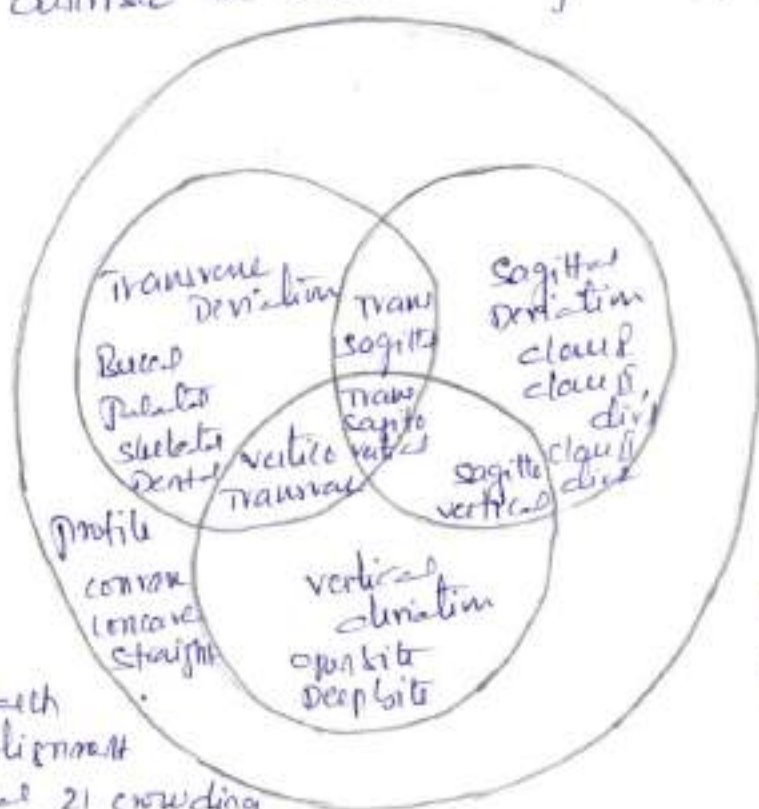

- Transverse skeletal and dental relationship is evaluated. Buccal and palatal crossbite if any are noted.
- The crossbite is further sub-classified as unilateral or bilateral.
- In addition, differentiation is made b/w skeletal and dental crossbite.

Step 4 (Class)

- This involves assessment of sagittal relationship; it is classified as - Angle's class I / class II / class III malocclusion.

Step 5 (Bite depth)

- Malocclusion in the vertical plane are noted.
- They are described as anterior or posterior open bite.
